
Assessment -1

Q1. Create a Food billing system Make sure each business logic is denoted with appropriate comments and make your code interactive and represent clean and clear output on your console screen. Adhere to the coding principles Firstly, display the food items available Then after the user can choose any of the item displayed Also take the quantity of selected food item by the customer, then ask the user that he/she wanna select more? If yes then again display the food items available and take an order from the customer. Here, you have to consider the total bill as the price of food items previously selected plus the price of new items added should display as a whole bill. If no then display the final bill on the screen Example of such system id given below ?

Ans :-

```
#include<stdio.h>

int main()
{
    int choice,qty,amount,total;
    char more;
    int totalamount=0;
    do
    {
        //display menu
        printf("\n====menu===\n");
        printf("1.pizza - Rs 180/pcs \n");
        printf("2. burger - Rs 100/pcs \n");
        printf("3.dosa - Rs 120/pcs \n");
        printf("4.idli -RS 50/pcs \n");
        printf("=====\n");

        // user choice
        printf(" enter your choice:");
        scanf("%d", &choice);

        //take qty and calculate
```

```
switch (choice){  
    case 1:  
        printf(" you select pizza.\n");  
        printf(" enter the qty. ");  
        scanf("%d", &qty);  
        amount=180 * qty;  
        break;  
  
    case 2:  
        printf(" you select burrrger.\n");  
        printf(" enter the qty. ");  
        scanf("%d", &qty);  
        amount=100 * qty;  
        break;  
  
    case 3:  
        printf(" you select dosa.\n");  
        printf(" enter the qty. ");  
        scanf("%d", &qty);  
        amount=120 * qty;  
        break;  
  
    case 4:  
        printf(" you select idli.\n");  
        printf(" enter the qty. ");  
        scanf("%d", &qty);  
        amount=50 * qty;  
        break;  
    default:  
        printf(" invalid choice please try again.\n");  
        amount=0;
```

```
}  
  
printf(" amount : %d\n", amount);  
  
totalamount +=amount;  
  
printf(" total amount is: %d\n", totalamount);  
  
  
printf(" Do you want to place more oderes ?(y/n):");  
  
scanf(" %c ", &more);
```

```
}while(more=='y' || more=='Y');  
  
printf("Thankyou for your order \n");  
  
printf(" Your total bill is:%d\n",totalamount);
```

```
}
```
